TED 757  Leadership Development in Technology Education

Spring 2016

The development of dynamic and creative leaders is the core of any education graduate program. Knowledge alone goes nowhere. However, armed with the ability to practice powerful leadership, education graduates will rise to the occasion to transform any organization. Meeting the leadership challenges facing our diverse and changing technological society will enable graduate students to heighten their value and worth in the marketplace. This course focuses on helping students gain leadership knowledge, skill and practice for effectively leading in their chosen discipline. Therefore, emphasis is targeted towards graduate students’ abilities to assess and develop their own leadership futures through a host of feedback mechanisms. Although many examples used in the course will be technology, engineering and design education based, the course is open to all graduate students that want to study leadership. The course will emphasize current research in leadership development from both educational and business perspectives.

Wednesday from 4:10-6:55pm
Poe Hall rm. 742
Instructor:  Dr. Aaron C. Clark, DTE
